

Copilot Security Assessment

Copilot is awesome! It retrieves documents you have access to and generates reports, presentations, emails, and even song lyrics! Your CEO wants everyone to have it, yesterday.

The Problem

Your organization has sensitive data in widely accessible OneDrive and SharePoint folders. You can bet on it. The only reason it stays safe is employees don't go poking around and only security "penetration-tests" find that salaries can be seen by almost anyone.

Copilot exhaustively indexes data that everyone can see. It can surface extremely sensitive information to anyone who cares to ask.

EXAMPLE:

HR salary info is often in shared links in folders & emails which Copilot indexes and can use to answer questions like:

Generating Output...

Can you guess what my peer Bob's salary is?

Our Solution

Assess the risks of letting Copilot loose on your OneDrive, Sharepoint, and Teams based corporate environments.

Classify Data

Surface sensitive data like HR information, PII, PCI, or business IP across O365

Size Up Copilot Risk

Identify the riskiest folders, sites, & users whose access needs to be tightened

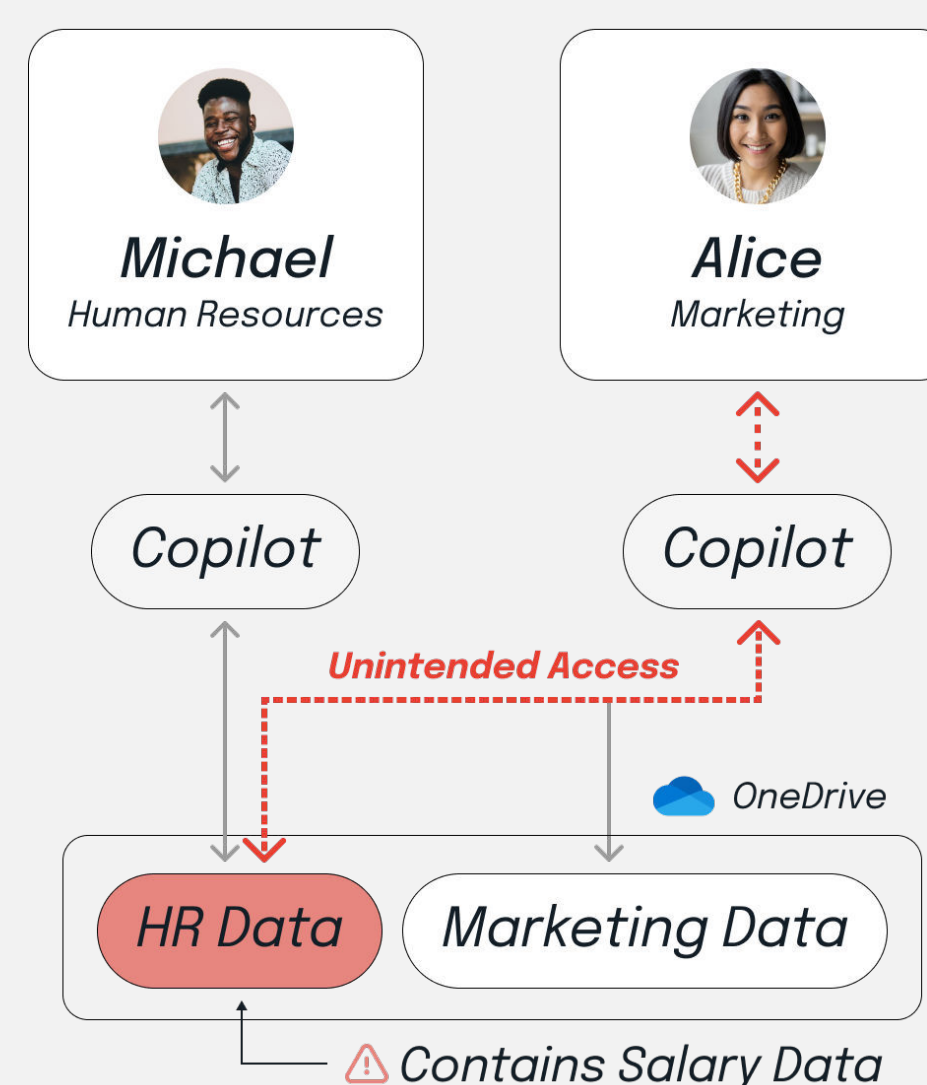

Remediate With A Plan

Recommend actionable steps for removing unwanted risk in data retrieved by Copilot.

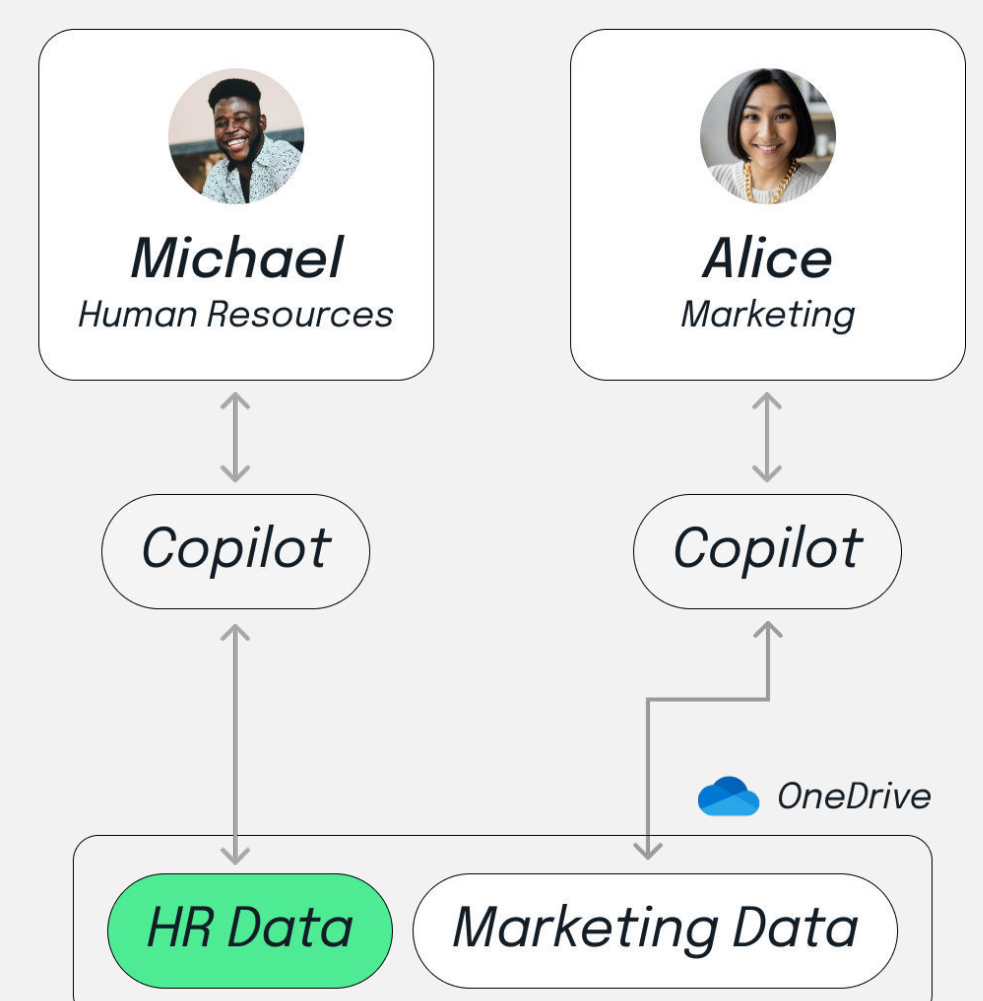

Before

Retrieving the wrong data

After

Innovating with the right data

15 mins to set up, 1 day to learn what happens when Copilot meets your Corporate data.
